Professional Summary

Site Reliability Engineer with experience managing and supporting large-scale production infrastructure on **Google Cloud Platform (GCP)** and **Kubernetes** for **Pathao**, a leading South Asian super-app serving **10M+ users**, **300K+ drivers and couriers**, and **200K+ merchants** across ride-sharing, food delivery, courier, parcel, payments, and e-commerce services.

Experienced in **Kubernetes Operations**, **Observability**, **Monitoring**, **Centralized Logging**, **Incident Response**, **CI/CD**, **Networking**, **Infrastructure Automation**, and **Cloud-Native Platform Engineering**. Skilled in building **reliable** and **scalable** systems.

Technical Skills

Cloud & Infrastructure : GCP, Terraform, Ansible, Kubernetes, Docker, Helm, Linux
CI/CD & Automation : GitLab CI/CD, GitHub Actions, ArgoCD, Bash, Git
Observability & Monitoring : Grafana, Prometheus, Thanos, Loki, Fluent Bit, Filebeat, Elasticsearch, Kibana
Networking & Platform : Proxy, Load Balancing, DNS, TLS/SSL, Kong, Traefik, Authetik, NetBird, Vault, Consul, Harbor
Database & Messaging : PostgreSQL, MySQL, MongoDB, Redis, RabbitMQ, Elasticsearch
Programming & Scripting : Go, Python, Java, Javascript, C/C++
Others : Flask, Android, Streamlit, JavaFX, FastAPI

Work Experience

Pathao *Jan 2025 – Present*

Site Reliability Engineer (SRE I → Associate SRE → SRE Intern) Dhaka, Bangladesh

- Operated and supported **large-scale production infrastructure** on **Google Cloud Platform (GCP)** and **GKE** serving **10M+ users** across Ride, Food, Courier, Parcel, Pay, and Commerce platforms.
- **Reduced production latency** by designing and deploying a **NetBird internal tunnel** for Pathao Pay team — enabling rides, food, shop and platform services to bypass Cloudflare and use **internal networking**, directly lowering round-trip times.
- Designed, deployed and maintained **centralized logging infrastructure** using **Fluent Bit, Loki and Grafana**, improving platform-wide observability.
- Built **monitoring dashboards and alerts** in **Grafana/Beatbox** using **Prometheus**, enabling proactive incident detection; set up alerting pipelines to **Mattermost** channels.
- Managed **Kubernetes workloads**, deployments, **gke cluster operations**, access management in infra, networking, DNS, Internal Load Balancers, VPN, **Kong API plugins**, and production platform services.
- Implemented infrastructure automation using **Go**, Kubernetes **CronJobs**, **custom controllers**, and **internal tooling**.
- Deployed **Consul, RabbitMQ, Redis, ArgoCD, NetBird**, and other cloud-native technologies through production deployments and Proof-of-Concept initiatives.
- Migrated **all production container images** from public registries to internal **Harbor** registry, eliminating DockerHub rate-limit failures in production clusters making it persistent and reliable.
- Handled production **outage**, **incident response**, **troubleshooting**, **root cause analysis**, and **platform reliability** improvements.
- Collaborated with backend, data engineering, platform, payments, and product teams — supporting **CI/CD pipelines**, deployment troubleshooting, Helm chart issues, and infrastructure changes.

Education

- **Shahjalal University of Science & Technology, Sylhet** *2019-2024*

  B.Sc. in Computer Science and Engineering CGPA 3.19/4
